A Kid's Introduction to Physics (and Beyond) This book (70 pages softcover 6"x8" with 14 font) introduces young people to physics starting with their natural wonder about the things around them. It builds on their common sense, making it clear and precise, and shows them how to go from their common sense to the advanced method of modern science.

Kids Intro to Physics (and Beyond)

Physics is divided into many fields of study. Mechanics deals with the effect of forces on objects and the motions of objects. Acoustics is concerned with sound. Optics is the study of light. Thermodynamics deals with the form of energy called heat. Electronics and magnetism are concerned with a basic property of matter called electric charge. Atomic physics concerns the structure of atoms (the building blocks of matter) and the forces that act on them.

Physics is a branch of science that studies matter and its motion as well as how it interacts with energy and forces. Physics is a huge subject. There are many branches of physics including electricity, astronomy, motion, waves, sound, and light. Physics studies the smallest elementary particles and atoms as well as the largest stars and the universe.

Science: Physics for Kids - Ducksters

Therefore, teaching kids physics, by way of toys, is a very practical approach and will give them a head start in physics. And it will do this in a way which is already very interesting to them anyway, through play time with toys. This will be a great addition to the learning they are already doing in their science classes.

Physics For Kids - Real World Physics Problems

First and foremost, we'd wanna include Isaac Newton. Especially when you start to study physics, you're starting to understand the world as Newton understood it. He understood, "Hey, you know, "things don't fall to the ground "just 'cause they always fall to, "just 'cause that's the way the universe is.

The physics of motion is all about forces. Forces need to act upon an object to get it moving, or to change its motion. Changes in motion won't just happen on their own. So how is all of this motion measured? Physicists use some basic terms when they look at motion. How fast an object moves, its speed or Velocity, can be influenced by forces. (Note: Even though the terms 'speed' and 'velocity' are often used at the same time, they actually have different meanings.)
