ANSYS has made our life easier by integrating Advanced Size Functions (ASF) into ANSYS Meshing which can do a lot of this initial work for us. These ASFs are used to automatically refine the mesh (with no user input required) using criteria based on local Proximity (between two or more surfaces) and Local

In ANSYS Meshing, one approach involves using the pinch tool to remove this problematic junction. A second approach which is likely to achieve a higher-quality mesh involves slicing the curved surface before it makes contact with the ground and extruding a block geometry from the sliced face to make contact with the ground.
