Recommendations and Guidelines. Appropriate Dosing for Parenteral Nutrition: Persistent shortages of parenteral nutrition (PN) components have led to a tendency of practitioners providing less than adequate dosing, which can lead to nutrient deficiencies and impair growth and healing. This document provides the requirements and recommendations for dosing of nutrients for a complete PN prescription.

## **ASPEN | Parenteral Nutrition Resources**

The purpose of this handbook is to serve as a quick reference for dietitians. This handbook does not replace other resources, information or clinical judgment. We encourage the users of this handbook to consult other resources, to use their clinical judgement and consult other health professionals (physicians, pharmacists, other dietitians, etc.) when making recommendations and prescriptions for their clients.

Controversy remains as to whether enteral supplementation of  $\omega$ -3 fatty acids (FA) could improve outcomes in patients with acute respiratory distress syndrome (ARDS). Thus, we did a meta-analysis and aimed to investigate the benefit and harm of enteral  $\omega$ -3 FA supplementation in adult patients with ARDS.
