Secondly, when control and observation are exercised through the boundary of the domain, the operator representing the sensor and actuator are also often unbounded. The present book, in two volumes, is in some sense a self-contained account of this theory of quadratic cost optimal control for a large class of infinite-dimensional systems.

For n -representation infinite algebras, we have the following simpler result, where we do not have to care about l -homogeneity. Theorem 2.10. Let Λ_i be an n_i -representation infinite algebra for $i \in \{1, 2\}$. If $\Lambda_1 / J_1 \otimes \Lambda_2 / J_2$ is semisimple then $\Lambda_1 \otimes \Lambda_2$ is an $(n_1 + n_2)$ -representation infinite algebra.
